Hear how CareMonitor, a Digital Health solutions provider covering care settings have made their journey to cloud with Amazon Web Services, and the benefits they have derived from being on a scalable cloud platform to improve provider and patient outcomes at a time of urgency.

There will also be a panel discussion where experts will answer questions and provide insight on how to leverage cloud technologies to enable healthcare providers to

minimise patient care siloing.

### Key Learning Points

- How a shared care, real-time remote monitoring and population health management platform leveraged cloud technologies to quickly pivot to support acute care needs
- How cloud is enabling providers, through the healthcare IT solutions they use, to better facilitate patient care transition
- How care continuity, personalization of care across the spectrum from consumers to our active ageing communities are increasingly supported on cloud
