

How do I refer?

In Medtech send us a referral by selecting the advanced form '**New referral to PHO**'.

You will then have the option of selecting the service you require: Breast, cervical or support to service.

Complete the referral with the required information and submit to us. We will then manage the referral and the patients screening requirements. You will be notified of the outcome.

What we can do to assist:

- Support general practice and identified 'champions' within your practices to identify and manage the priority population for this service
 - Provide additional contact attempts to the patient
 - Provide education and promotion of screening to patients
 - Provide home visits to educate, promote and provide smears if required
 - Book patients to general practice for smears
 - Book patients into BSM or alternative locations for breast screening e.g. the mobile breast screening unit, where appropriate
 - Provide alternative options for smears to be done outside of the practice in appropriate settings
 - Provide transport where required to get the women to screening
 - Support women to other breast or cervical screening related services if required in addition to screening
 - Identify and assist you to enrol your eligible women in the National breast screening programme.
-
