

WOUND CHALLENGES IN COLORECTAL SURGERY

ONLINE STUDY EVENINGS

This webinar, on two consecutive evenings, will provide a mixture of academic and practical presentations looking at ways of preventing and managing wound infections after colorectal surgery.

Subjects covered will include prophylactic antibiotics, wound protectors, the impact of bowel preparation on preventing wound infection, management of perineal wounds after abdominoperineal resection, wound bed preparation, case studies with cavity wounds in the community as well as presentations from companies updating us on wound management products.

We look forward to sessions that will provide useful updates, practical tips, and the opportunity for the sharing of ideas.

**Monday 12 October,
6.30 – 8.30pm**
